

Patternmaker's Hammers

The Dosch Manufacturing Co. of Bridgeport, Conn., has perfected a patternmaker's hammer. The illustrations are one-third actual size and give a very

The Dosch Mfg. Co.'s Patternmaker's Hammers

good idea of the hammers and the special shapes. The attractive feature is the long peen. This is of great advantage for getting into deep holes or narrow spaces. Owing to the size of the end, the holding and driving of small nails, brads, tacks, etc., is made easy.

The hammer head is of steel, turned to shape, hardened and polished. The

handle is of hickory, finely finished and of a light and commonly approved shape. The set consists of the two sizes shown, although either size will be sold separately. The maker guarantees the tools to be first class in every respect.

The advertisement features a large illustration of the 'THE UNION MITRE BOX' tool. It shows a wooden mitre box with a saw blade held in place by a friction lock mechanism. The front of the box is open, demonstrating its use for cutting square and mitre joints. Below the illustration, the company name and address are printed.

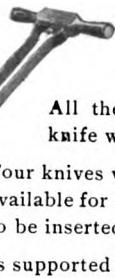

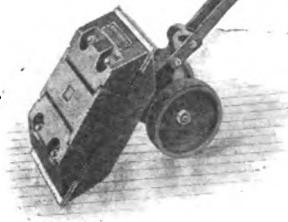

**THE UNION
MITRE BOX**

Absolutely open front allows greatly increased width of square and mitre cuts.
Friction Lock that holds at any angle or fraction of a degree.
Saw always out of the way when not in use.
Practically instant adjustment for cutting tenons.

The Champion Floor- Scraper

Note the following
features:

All the weight is around the knife where it should be.

Four knives with eight cutting edges available for use before new knife has to be inserted.

Knives supported right down to the scraping edge.

Positive gauge for setting the knives.

Chipbreaker to bring shavings from the floor without leaving a ridge.

Handle bolted solidly to the head prevents trembling, yet it is adjustable to any height but the angle of the head always remains the same.

Twelve knives with twenty-four cutting edges furnished with each machine.

Write for Circular which will tell you all about it. It is a strictly high grade machine, certain to give satisfaction, and sold at a low price.
